

## GLOBAL HELICOPTER SERVICE

The mining industry requires reliable logistics services, often in remote and austere environments. GHS thrives in these challenging conditions and we will ensure that your operations are well supported with services that are safe and efficient, no matter how remote or harsh the location.

A helicopter on readiness standby is a resource one cannot afford to be without. The assurance of immediate access to airborne transportation, for a life or death casualty event, to a well-equipped medical facility is crucial.

The transport of passengers and freight as and when required can be used to secure ongoing mine production by supplying critical parts and technical expertise in cases of vital equipment breakdown.

The ability to transport high-value product directly from mine sites guarantees safety and removes all risk of theft.

Having a helicopter available and ready to fly day or night will significantly reduce all these conditions.

A Medevac capability fulfills a critical role in the mining industry. We provide modern and effective Medevac systems for mining operations worldwide and offer a basic bespoke utility solution or a full Air Ambulance option to suit any size mining operation. Companies like Rio Tinto, CGG Veritas, BHP Billiton, Bellezone, African Minerals, to name a few have trusted the professional competence of our operations team.
