We Guarantee  
our Customers a  
Maximum in  
Terms of Aircraft  
Availability

# ABOUT GHS

Global Helicopter Service has been established in 2014 by a group of experts with many years of experience in the helicopter industry.

GHS is certified to EASA regulations for commercial helicopter operations & maintenance worldwide.

GHS was and is involved in multiple projects with leading humanitarian and governmental organizations such as Médecins Sans Frontières, the World Food Program of the United Nations, the International Red Cross and the European Defence Agency.

We provide medical evacuation flights, freight and passenger transportation incl. dangerous goods, aerial work, oil and gas rig support, airborne firefighting and governmental services.

Since our clients expect uninterrupted availability of our helicopters in the sometimes extremely harsh operating environments, maintenance and repair of heli-

copters was another main focus of our activities right from the beginning on.

Here initially, our main focus was the maintenance and repair of our own helicopters in the missions. To achieve this, we have established stations for line maintenance in every location we operate from and a base maintenance station in Germany.

All maintenance facilities are approved by the German Civil Aviation Authority, Luftfahrt-Bundesamt (LBA) under EASA regulations.

In order to further improve our operational capabilities in Germany, we recently moved to a new facility in the southernmost area of Germany, close to the historic city of Salzburg, just 25 km away from the Salzburg International Airport.

## EASA-PART 145 MAINTENANCE

Highly qualified GHS technicians provide maintenance services at our Part 145 facilities worldwide, which are required to undergo regular quality audits, along with adherence to GHS safety principles and optimized task planning. Services included:

- In depth knowledge and wide-ranging experience
- A close team of individuals with many decades of experience in commercial helicopter aviation all over the world
- Excellent base of different but complimentary expertise
- Understanding of latest industry standards, regulatory changes and best practice working processes

## STORAGE

At GHS we understand that proper storage is a critical factor in assuring an aircraft is maintained in a "ready now" status for immediate mobilization when required and in maintaining the value of our customers' aircraft.

In a climatized, clean and safe environment we provide all necessary measures to store the aircraft in line with manufacturer instructions.

- Hangar space only
- Short-term storage
- Long-term storage

## LOGISTICS

We focus in providing our services to our customers as simple as possible. We recognize and believe that our clients should not be troubled more than absolutely necessary during any of the mobilization processes, to remain focused on their daily responsibilities.

Based on our own experience to organize functional logistical chains between suppliers, our corporate headquarters in Germany and our missions, sometimes in areas that are very hard to access, we offer logistics services tailored to our customers' needs.

With our extensive partnerships and expert logistics team, we can arrange all transportation requirements from our clients' location to our storage and maintenance facility and back.

This includes the aircraft as such but components, spare parts, equipment and tools.

- Ground Transportation
- Air Transportation
- Sea Transportation
- Ferry Flights
- Spare Part Logistics
